Abstract (en)

[origin: DE102005056063A1] The disk has two concentric friction surfaces (2), and a brake disk collar (3) that is attached to the friction surfaces and is connected with a wheel hub. A magnet wheel (4) is held on the brake disk collar in a rotationally firm manner. The magnet wheel is radially supported on a compensating unit which is axially mounted in a circular groove of the brake disk collar, where the compensation unit is designed as a radially deformable ring or as a shaft ring (5). The groove is formed in an outer or inner casing surface of the collar.
