Abstract (en)
[origin: DE102005057164A1] The ice cube delivery duct (17) has an opening (23) which can be closed by an insulated baffle (18) driven by an electric motor so that the flexible chilled water nozzle (27) is able to deliver water (34) to a vessel (35). When the opening (23) is opened by the rotation of the baffle shaft the nozzle is deflected and ice cubes (29) may be delivered to the vessel.
