Abstract (en)

[origin: WO2007059770A1] The present invention relates to a heat exchanger module and a heat exchanger system for transfer of heat between different media, in particular a heat exchanger module for preheating materials that are to be employed in a process for biogas production, such as liquid manure, industrial process water, sludge and/or ooze. A heat exchanger module is provided, wherein the heat exchanger module has walls and comprises a first flow channel positioned in thermal contact with a second flow channel for heat exchange between a first fluid flowing in the first flow channel and a second fluid flowing in the second flow channel, and wherein a first section of the first flow channel abuts at least three second sections of the second flow channel. Further a heat exchanger system is provided, comprising one or more heat exchanger modules according to the invention.
