Abstract (en)
[origin: WO2007066016A1] The invention relates to an information transmission system, comprising: - a local area network (1) exhibiting: - a communication module; - a capture module (53) for picking up the headers of frames exchanged by way of the communication module; - a programming module (51) controlling the capture of the frame headers and the transmission of the headers captured as a function of predefined conditions; - a transmission module (52) for transmitting the captured headers, by way of the communication module; - an analysis device (6) remote from the local area network (1), suitable for communicating with the local area network by way of the communication module and comprising an analysis module (65) suitable for carrying out a statistical analysis of the headers transmitted by the transmission module.
