Abstract (en)
[origin: FR2892837A1] The method involves transmitting campaign rules (RGC) to a presence server (SP) from a campaign server (SC) using a campaign manager (GEC) in the server (SC). A presence manager (GEP) of the server (SP) notifies the server (SC) that an event relating to the presence of a communicating object (Cn) in a radiocommunication network (RR) satisfies the transmitted rules in order to initiate downloading of data from the server (SC) towards the available object. Independent claims are also included for the following: (1) a system for downloading data from a campaign server (2) a program comprising instructions which executes the steps of data downloading method.
