Abstract (en)

[origin: EP1958704A1] The device has a feed channel (12) for feeding a pasty compound i.e. adhesive clocked component, where the feed channel opens out into a main channel (14). A nozzle body comprises a set of distribution channels (16), and runs transversely to the main channel. The distribution channels have an entry cross-section on the main channel and an exit cross-section (16.2), where the exit cross-section of the distribution channels opens out in a dispensing area (18). The distribution channels have a distribution channel area rising in a flow direction of the pasty compound.
