Abstract (en)
The invention relates to a pressure die casting machine, in particular for manufacturing ceramic products, for example sanitary articles, comprising two mould holders (22) suitable for receiving each a respective half mould. The mould holders are connected to respective support means (20) reciprocally moving between a relative separation position, suitable for the demoulding and drawing of the cast piece, and a relative approach position, wherein the two half moulds are closed along a contact plane for casting and emptying the mould. The support means (20) are in turn connected to orientation means (16, 18) suitable for orientating said support means (20) so as to make said contact plane between the two half moulds turnable by at least 90° between a substantially vertical position and a substantially horizontal position.
