Abstract (en)

[origin: EP1958847A1] The convoy has modules connected with each other, where each module defines a longitudinal section of the railway convoy. The modules have a carrier module (12) supporting on guiding and support units (10) and a carrier module (14). The module (14) is suspended at an end of the module (12) by being connected to the module (14) by a rigid connection or by a connection permitting a vertical displacement such that a chassis (18) of the module is vertically separated with respect to a chassis (22) of the module (12), at an interface between the modules (12, 14). Independent claims are also included for the following: (1) a family of railway convoy for transport of passengers (2) a method for fabricating railway convoy.
