Abstract (en)

[origin: EP1958913A1] In an elevator door control apparatus, a wireless tag apparatus is mounted to a first mount portion of an elevator. A tag reader that detects the wireless tag apparatus is mounted to a second mount portion that can be moved relative to the first mount portion by opening and closing an elevator door. A control apparatus main body detects a position of the elevator door by means of signals from the tag reader and controls opening and closing of the elevator door.
