Abstract (en)  
[origin: EP1959526A2] The device has processing stations (1) for assembling a cable, and a swivel arm (2) provided for supplying the cable to the processing stations. The swivel arm is supported in a guide (4) of a rotary disk (5) and rotated with the rotary disk by a motor (6). The swivel arm is movable to and fro parallel to its longitudinal direction by another motor (7) that is supported stationarily in the guide. An eccentric shaft (8) is rotated by the motor (7) and exhibits an eccentric (9), where the carriage is movable to and fro in the guide by the eccentric.
