Abstract (en)

[origin: WO2007065613A1] A device for delivering fluids to a bath-tub is described. The device comprises a main body (10) and nozzle elements (30). The main body (10) has a hollow space and a top surface, the top surface having a plurality of holes that each extend into the hollow space. The nozzle elements (30) have a nozzle head and a convex nozzle base, the nozzle base having an inlet opening, and the nozzle head having an outlet opening connected to the inlet opening. At least one hole is assigned a nozzle element (30) whose nozzle base rests on the hole. The device can be easily adapted to an individual bath-tub shape.
