Abstract (en)

[origin: DE102005050940B3] The foil cutting device includes a blade (1) with tip (2) pointing in the cutting direction, bounded by three wedge surfaces; a blade holder (6) and a fluid supply channel. The holder supports the blade at the end facing away from the cutting direction in the region of the tip at one or more support points (8). It is pierced by a fluid channel (7) coming out at the support point. There is an open downward groove from the channel end running towards the tip.
