Abstract (en)  
[origin: WO2007071460A1] The invention relates to a printing machine system comprising a first printing machine (01) which has at least one first printing unit (02) and a first funnel structure (07), arranged in a machine alignment (M1) of said printing unit (02), and further comprising a second printing machine (31) which has at least one second printing unit (03) and a second funnel structure (17) arranged in a machine alignment (M2) of said printing unit (03). The printing group cylinders (04; 06; 14; 16) of the first and second printing unit (02; 03) are positioned substantially orthogonally in relation to each other in the axial direction and the two funnel structures (07; 17) are positioned orthogonally in relation to each other in a trajectory (11; 21) running into the direction of transport (T1; T1'; T2) that is projected into the horizontal plane.
