Abstract (en)

[origin: US2009044576A1] An apparatus for loading items to be washed with an air flow, comprising a substantially closed first channel system for guiding an air flow which loads the items to be washed. A treatment chamber for receiving the items to be washed, a blower for driving the air flow, a heater for heating the air flow before the items to be washed are loaded, and a cooler for cooling the air flow after the items to be washed have been loaded are arranged in the first channel system. Here, the first channel system has outside the treatment chamber and the blower, two branches and which are connected to one another in parallel and can be flowed through in parallel by corresponding parts of the air flow. Here, the heater is arranged in a first branch and the cooler is arranged in a second branch of said branches. The invention likewise relates to a corresponding method.
