Abstract (en)

[origin: WO2007069051A2] The invention relates to a device for fixing a piece extending over a roof surface at an adjustable angle to the roof surface, a coupling piece (1) on the roof surface being fitted with a cover piece (2), the angle of which relative to the coupling piece may be adjusted by pivoting about an axis (4). The fixing of the cover piece (2) to the coupling piece (1) is achieved by means of corresponding toothed rings (1.3, 2.3) which may be brought into and out of engagement by the rotation of a bolt (3), provided with an eccentric surface.
