Abstract (en)  
[origin: WO2007068839A1] The invention relates to a display (1) intended to be mounted on a pair of spectacles (2), comprising an electronic and optical system for generating light beams (20A) and an imager (20B) intended to shape the optical beams output by said system, this display including a removable arrangement for fastening onto the pair of spectacles and an arrangement for adjusting the relative position of said imager and of the wearer's eyes. According to the invention, the display comprises two elements, namely a first element (10), which carries said removable fastening arrangement, and a second element (20), which comprises said electronic and optical system and said imager and can be connected to said first element thanks to said adjustment arrangement comprising a means for locking, in an adjusted position, said adjustment arrangement for adjusting the relative position of said imager and the wearer's eyes, both horizontally and vertically.
