Abstract (en)
[origin: DE102006033893A1] The device has multiple light modules (1a, 1b) provided, where each module has multiple groups (2a, 2b, 20a, 20b) of light sources (3a, 3b, 3c) that are applied on a printed circuit board (4) of the modules. One of the light sources has a light emitting diode that exhibits an optical unit, where the optical unit exhibits a radiation emission surface. The radiation emission surface exhibits a convex curved portion that partially surrounds a concave curved portion at a distance to an optical axis, where the optical axis runs through the concave curved portion.
