Abstract (en)  
[origin: EP1791038A1] The movement has an intermediate connection block (57) mounted pivoting around an axis (X) that extends along thickness of the movement. The connection block has two cylindrical fingers (62, 63) each arranged for exerting a force on respective zero setting hammers (4, 40). The fingers are situated on sides of a reception zone (100) following the direction of the axis. The hammers are intended to cooperate with a push button (60) in response to the activation of the button.
