Abstract (en)

[origin: WO2007099416A2] System for exploiting information selected on the basis of the position of a user, that includes - one or more transmitting devices (12) capable of transmitting respective information (I) and arranged along a predetermined route (13) , means (11) for receiving said respective information (I) selected on the basis of the position of a user (50) and user means (15,16) to reproduce information content (M) depending on said respective information(I) selected on the basis of the position of a user (50) . According to the invention: - said transmitting devices (12) are arranged at specific positions along said predetermined route (13) and said respective information (I) includes a number identifying the transmitting device (12) , - said means (11) for receiving said respective information (I) selected on the basis of the position of a user (50) are associated to means (14,15) to send said identification number (I) to one or more databases (32) in which is stored information content (M) and configured to return said information content (M) on the basis of said identification number (I) that is sent, said system also includes user means (15) to receive said information content (M) from said one or more databases (32) and send it to said user means (15, 16) to reproduce information content (M) depending on said respective information (I) selected on the basis of the position of a user (50) .
