Abstract (en)

[origin: WO2007068532A1] The invention relates to a modular converter system (2). According to the invention, the modular converter system (2) has a basic converter device (4) and at least one additional converter device (6), wherein said devices (4, 6) can be plugged laterally one beneath the other by means of their power-supply and load busbars (8, 10) and by means of a communication line (12). A modular converter system (2), which can be matched individually to any desired power output which may be required without a great deal of complexity, can therefore be achieved.
