Abstract (en)
A wireless remote-control model includes a safety management portion 312 having a central control device 31, and the safety management portion 312 includes a determination portion, such that when a battery 27 is connected correctly, a first mode buzz signal instruction is sent to a buzzer control portion 313 for indicating that the battery 27 is connected. If the battery is connected correctly and a start pushbutton is pressed during an examination period, a second mode buzz signal instruction is sent to the buzzer control portion 313 for indicating that the operation is started. Or a third mode buzz signal instruction is sent to the buzzer control portion 313 for indicating that a power motor 7 is at a driving idle state, when the examination determines a normal condition, so as to assure the safety of an operator (or a user) as well as the safety of the wireless remote-control model itself.
