Abstract (en)

[origin: EP1961668A1] The assembly has a storage container (2) for storing bulk products, and a reclosable desiccant stopper (4) provided with a desiccant unit. A limiting device (3) limits distribution rate of the products, and has upper and lower surfaces (20, 21), where the device is made of thermoplastic material. The device has a breakable membrane (5) connected to a circumference of a distribution opening and provided with a tow ring (7). A passage allows gaseous exchange between the two surfaces and prevents the distribution of the products by restricted dimensions of the passage. An independent claim is also included for a method for conditioning a unitary product.
