Abstract (en)
Container means comprises a containing element (2), frame means (3,4) supporting said containing element (2) and guide means (5) associable to a supporting structure (10), in particular a piece of furniture, said frame means (3,4) being slidably coupled to said guide means (5) so as to move between a retracted position (A), wherein said containing element (2) is inside said supporting structure (10), and an extracted position (B), wherein said containing element (2) is outside said supporting structure (10), whereby said frame means (3,4) further comprises first frame means (3) slidably coupled to said guide means (5) and second frame means (4) that supports said containing element (2) and is rotatable connected to said first frame means (3) so that said containing element (2) can be rotated in a rotated position (C;C').
