Abstract (en)
The invention concerns a locking cylinder comprising a cylinder housing in which a lock core (11) is pivotably mounted. The lock core works together with a locking latch (13) which actuates a lock or a switch and is arranged on a ring (12) turnably mounted on said lock core. According to the invention it is provided that the ring comprises on its inner surface (19) at least one recess (18) and preferably a plurality of recesses which are engageable with at least one driver (14,14'). The driver is moveable between a rest position and an engaging position in which the driver connects the ring to the lock core. The driver is turnably arranged in the lock core on a pivot axis (15,15') extending parallel and excentric to the pivot axis (16) of the lock core.
