Abstract (en)

[origin: EP1962012A2] The lamp has housing, in which an illuminant (8) is accommodated, where the light of the illuminant for producing signal function and/or lighting function steps outwards through a cover disc (4). A filter element (14) and lamellae (30), which produce the signal function and/or lighting function are adjustable in a radiation path between the illuminant and the cover disc. The filter element consists of translucent plastics, and is rotatable around an axis.
