Abstract (en)
[origin: EP1962319A2] The electromagnetic switching device comprises an electromagnet (1), mobile armature and reset spring (50). The total force of the armature is against the direction of the motion of the armature. A reset spring is stationary arranged in a supporting place (52) another reset spring is stored in the other supporting place (54). Both supporting place is kept parallel to the direction of the motion of the armature, running system axle is transferred laterally to each other. A reset spring with supporting place in a gear shift (70) is stored at the armature (6).
