Abstract (en)

[origin: EP1962320A1] The apparatus (1) has central blocks (2) of standard dimension carrying out differential and disjunction functions and provided with faces perpendicular to joining sides. The central blocks have electrical terminals (3, 3', 4, 4') originating from circuits ensuring the functions of the central blocks and located at standard places in different widths. End blocks (5, 6) are fixed to the central blocks and are selected among a range of predetermined end blocks to complete a housing of the apparatus for permitting integration and connection of the housing.
