Abstract (en)
Provided is a plasma gun 9 including: a cathode unit 20 generating plasma 6; and a return electrode unit 90 which ejects the plasma 6 generated in the cathode unit 20 toward a target and returns electrons reflected from the target to a power source. The return electrode unit 90 includes a frame 1e, an insulating tube 1h, and a gas flow means 91, 92, 93. The frame 1e includes a plasma outlet. The insulating tube 1h electrically insulates the surface of the plasma outlet. The gas flow means 91, 92, 93 are adapted to eject gases toward a target side end of the insulating tube 1h.
