Abstract (en)

[origin: WO2007073205A1] The invention relates to a method and apparatus for building an object by the layer-wise deposition of powder layers, the powder layers including building powder being transformed into an object, wherein the building powder is consolidated and made of metal or ceramic mixed with metal. The powder layer is arranged on a printing face of a piston and deposited in a pressure pulse onto a building table or a work piece, wherein the work piece includes previously deposited powder layers, and wherein the work piece is surrounded by a mould being at the sintering temperature of the building powder throughout the construction of the object.
