Abstract (en)

[origin: US2009211205A1] A method and an apparatus for wrapping articles and more particularly a pile of goods on a palette, in a foil hood, comprising the following operations-draw off of a length of a flat tube consisting from a supply, said flat tube consisting of respectively two foil webs, which are folded in an inward direction and accordingly are directly superposed in a flat state with an integral foil, opening out the end, which is to the fore in the draw off direction, of the tube, at least partially sealing the length, pulled off the foil supply, essentially athwart the draw off direction at a position remote from the foremost end of the tube (sealing position), cutting off the tube from the remaining foil supply at a position preceding the sealing position as considered in the draw off direction, drawing the tube over the articles to be wrapped, preferably after preceding reefing of the hood or of the tube portion eventually forming it on a reefing means, the flat tube, after final draw off from the supply thereof and prior to sealing being so folded inward from its outer sides in a V-shape that the two foil webs are superposed at the outer side during sealing respectively not directly but with the inclusion therebetween of a V-shaped foil fold whose fold tip extends toward the middle of the foil fold.
