Abstract (en)
[origin: WO2007071897A1] A document storage device for storing sheet documents is disclosed. The device comprises a band (3) , which can be wound onto a document storage roller (2) such that sheet documents can be stored between adjacent windings of the band on the document storage roller and which can be unwound from the document storage roller thereby dispensing the stored documents, and a scraper assembly rotatable about a pivot (21) and comprising a scraper (19) and an end stop (20) , each for contacting the band on the document storage roller. The scraper assembly is urged by a first biasing element (22) such that the end stop maintains contact with the band on the document storage roller at a point distal from the pivot relative to the point of contact of the scraper with the band on the document storage roller.
