Abstract (en)

[origin: WO2007071463A1] The invention relates to a method for regulating a combustion process of an internal combustion engine with exhaust-gas recirculation, which can be operated with a variable air/fuel ratio, and a fresh-air flow and a recirculated exhaust-gas flow. According to the invention, both the fresh air and the recirculated exhaust-gas flow are metered. The present invention advantageously provides a method for regulating a combustion process of an internal combustion engine with exhaust-gas recirculation, which method makes precise determination of the exhaust-gas recirculating rate possible with a low fault tolerance.
