Abstract (en)

[origin: WO2007071247A2] The present invention relates to an electronic ignition circuit comprising a resonator circuit operatively connected to a controllable switch, the ignition circuit further comprising means for controlling the controllable switch in response to a determined level of a current flowing in the resonator circuit. The present invention further relates to a method for operating an electronic ignition circuit comprising a resonator circuit operatively connected to a controllable switch, the method comprising the step of controlling the controllable switch in response to a determined level of a current flowing in the resonator circuit.
