Abstract (en)

[origin: WO2007074033A1] The invention relates to a method for operating a combustion chamber (2) of a gas turbine, in particular of a power plant, wherein the combustion chamber (2) has at least one burner (1) which is equipped with a catalytic pilot burner (3). In order to improve the stability of the combustion and the pollutant emissions of the combustion chamber (2), at a low power of the combustion chamber (2), the pilot burner (3) is actuated in such a way as to generate a synthesis gas with a high proportion of hydrogen gas, and at a high power of the combustion chamber (2), the pilot burner (3) is actuated such that the generated synthesis gas has a low proportion of hydrogen gas.
