Abstract (en)
[origin: EP1801672A1] The watch case, comprising an annular body (10) with a cylindrical upper portion (24), and a bezel (18) that rotates relative to it, has a flexible elastic ring (30) that locks the bezel in place to prevent any axial movement. The body and bezel are connected by a clip mechanism (38, 40), with the flexible elastic ring, e.g. in the form of a split stainless steel or plastic ring, locking the bezel in place.
