Abstract (en)

[origin: DE102005061732A1] A method for the fabrication of a metal clamping part (1) has a first opening (2) for receiving a clamping screw and a second opening for receiving an electrical conductor, where one or more inner surfaces (5-7) of the cavity (4) of the second opening (3) are structured. Structuring of at least one of the inner surface (5-7) is carried out with the aid of embossing and hammering techniques : An independent claim is included for a device for fabricating a metal clamping part.
