Abstract (en)

[origin: FR2895436A1] Method for controlling an opening in a vehicle, e.g. a sunroof, in which it is determined whether a pre-specified event, in particular the closing of the sunroof occurs in the absence of an event, in particular trapping of an object, that could inhibit it. If this is the case, and the object does not close, a new teaching process is carried out so that the opening, or sunroof, once again opens and closes correctly.
