Abstract (en)

The support plate (1) has a support cylinder (2) which is detachably connected with the support plate. The detachable connection is take place over a snap-up connection. A receiving pan is for the receiving of a supporting head (5) of a support cylinder. The receiving pan has an undercut which forms the snap-up connection in interaction with the supporting head. The undercut is elastically or flexibly performed. An independent claim is also included for a stripping device for the detachment of a support plate.

Abstract (de)
