Abstract (en)

[origin: EP1965005A1] The insert has a tubular partition (1) defining a housing for accommodating a foot of a post, and horizontal beams (4, 5) extending to a base of the partition. The beams constitute a positioning and anchoring unit for positioning and anchoring the insert with prestressed or reinforcing cords (6, 7) of a slab. Arch-buttresses or buttresses i.e. projecting wings (11-14) extend from top of the partition till an end provided with cover strips (15, 16), which are moved away from the partition and located at a determined height with respect to a height of the positioning and anchoring unit.
