Abstract (en)
[origin: EP1965138A1] The cup-shaped distributor holder (N), has a cylindrical casing (100) fitting against the lower inlet opening of the water storage tank of the sanitary boiler. It forms an inlet ante-chamber for this tank. Its top flange mounts in the edge of the tank opening. The base includes a central axial inlet and an axially-offset outlet pipe connection. Fastening holes (15) permit attachment under the tank base. Below the cap (C) covering the central connection, outlet openings (250) direct the flow against the wall of the cylindrical casing (100).
