Abstract (en)

A connector device includes a plug housing, a pair of plug contacts, a receptacle housing, a separator, a pair of receptacle contacts and a pair of protective walls. The plug contacts are arranged in a first direction in the plug housing so as to form a slot therebetween. The receptacle housing is adapted to be engaged with the plug housing. The separator is provided in the plug housing and adapted to be fitted into the slot, when the receptacle housing is engaged with the plug housing. The receptacle contacts are disposed on the separator and adapted to be brought into contact with the plug contacts, when the receptacle housing is engaged with the plug housing. The pair of protective walls are arranged in the first direction at a front end portion of the plug housing so as to oppose distal ends of the plug contacts.
