Abstract (en)

[origin: WO2007071720A1] The invention relates to a method for disinfecting objects, in which an atmospheric plasma jet is generated by means of an electrical discharge in a volume that is penetrated by a working gas while the surface of the object is impinged upon at least in part by the plasma jet, the disinfectant effect being produced by the energy transfer from the plasma jet to the surface. The inventive method allows surfaces to be disinfected effectively without increasing the amount of disinfectant to be used.
