Abstract (en)
[origin: US2009094837A1] A flush cutter, having a first gripper part, having a first blade part comprising a blade, a second gripper part, comprising a second blade part having a blade, a joint pivot-connecting the blade parts and having handle elements associated with the blade parts. It is provided that the blades of the first and second blade parts have at least two cutting sections, wherein a first cutting section, which is preferably arranged adjacent to the joint, or directly abuts to the same, respectively, having a first cutting edge, which is formed by means of two cutting surfaces extending toward each other in a V-shaped manner, and which is arranged at a distance to an exterior surface of the blade part, and a second cutting section, which is preferably arranged at a distance to the joint, and adjoins the first cutting section on the side facing away from the joint, having a second cutting edge, comprising two cutting surfaces extending toward each other in a V-shaped manner, of which one of them coincides with the exterior surface of the blade part.
