Abstract (en)  
[origin: WO2007074380A1] A printing device with n print heads (A, B, C, D, etc) which move together and are arranged equidistantly with a separation (d) between their centres which print on an inked printing ribbon (X) which advances when the heads (A, B, C, D, etc) are stopped and which stops when the print heads (A, B, C, D, etc) print on the same and where the printing ribbon X is divided into S sectors of l length. The printing by the heads (A, B, C, D, etc) is accompanied by the displacement of the ribbon for a d +l distance to optimise the operation times while using all the sectors S of the ribbon X in the printing process.
