Abstract (en)

[origin: WO2007071528A1] The invention relates to a camshaft adjuster (10) for an internal combustion engine, comprising a locking mechanism. At least one locking element (21, 22) which can be locked in the zone of a central position (20) as well as at least one additional locking element (23, 24) that can be locked in the zone of a late final position (19) or an early final position (20) are provided such that the internal combustion engine can be selectively started from the final position (19, 20) or the central position .
