Abstract (en)  
[origin: FR2895471A1] The device has a flywheel (20) comprising a hub (22) adapted to be fixed on a crankshaft, and an annular inertial mass (21) whose diameter is larger than the hub, where the mass is integrated to the hub. The inertial mass has an oscillation damping unit with a flexible plate (30) that connects the hub to the mass and elastically deforms along a direction of an axis of the crankshaft. The flexible plate has a central part (33) supported on the crankshaft, and an external part (312) that is supported against and co-operated by friction with a rear radial face (19) of the inertial mass.
