Abstract (en)

[origin: WO2007075097A1] The invention relates to a processing unit (1) and a method for configuring a networked automation system. To allow automated configuration of the automation system, it is proposed that the processing unit (1) has first mean for ascertaining components suitable for performing an automation task from components of the automation system which are networked to one another, and second means for allocating the automation task to at 15 least one of the suitable components .
