Abstract (en)

[origin: EP1804220A1] The method involves installation of first communication connection (40) between portable device and medium (10) for several service-specific codes stored on medium or for several different types of media. A secure end to end connection is configured for each service between access unit (60) and medium. Independent claims are included for the following: (1) electronic portable device for the execution of the method (2) cladding for backup of communication connection between medium and portable device.
