Abstract (en)

[origin: DE102005062515A1] Device has a line unit (2) comprising a connection device for connection to an energy consumer, and two energy storage units (4) that are electrically connected to the line unit in a detachable manner. One storage unit has a printed circuit board (5), and energy storages (6) are provided on one or both sides of the board. The energy storages are connected with one another by using electrical wires, where one storage unit is provided with power electronics with a connection unit for connection to a power generator.
