Abstract (en)

[origin: WO2007074237A2] The invention relates to a method for adjusting a pulse detection threshold consisting in detecting a pulse when the edge of said pulse envelop crosses the threshold, in allocating (A) a starting value ($TH_{_{0}}$) to the threshold and in adjusting ($B_{_{1}}$) the threshold (TH) in such a way that the number of pulses detected on at least one observation window ($OW_{_{j}}$) satisfies a predetermined criterion in a determined time.
